

The Impinger Revolution

Richard Hale, Senior Procurement Manager Pizza Hut UK, comments on the Lincoln low profile oven:

Lincoln is a preferred Pizza Hut UK supplier, with 80% of restaurants choosing the low profile impinger oven to power the kitchen.

'Lincoln technology is second to none and the Low Profile Impinger meets our demanding requirements. A busy store can cook over 150 pizzas an hour,' said Richard.

'Added benefits for a company the size of Pizza Hut including speed, consistency, flexibility and ease-of-use.'

'All our approved suppliers must back up products professionally and we expect ovens to be serviced within a specified time frame. Lincoln does this very well indeed.'

The world-leading manufacturer of ovens, Lincoln launched the first impinger conveyor oven to the pizza industry over 20 years ago. The continuous flow of conveyor cooking increased kitchen output while reducing labour costs, a win-win situation.

Today Impinger Technology is changing the sandwich and food-to-go sector. Join the Impinger Revolution by offering healthy, tasty food cooked to perfection up to four times faster than in a conventional oven.
